Mega update: RaceRoom brings the 2026 DTM to the virtual racetrack

- **Three brand-new cars and one updated model**
- **All liveries from the 2026 DTM season**
- **Extensive technical improvements**

Munich. Fantastic news for all DTM fans on RaceRoom: On 4th August, KW Studios will release an extensive update, bringing three new GT3 cars and a modified model to the virtual racetrack, along with all the designs from the current season.

At the heart of the update are the three brand-new GT3 race cars: the Aston Martin Vantage GT3 Evo, Ford Mustang GT3 Evo, and Lamborghini Temerario GT3 are making their first appearance on the platform. Joining them is the updated Evo version of the car that won the DTM championship for Porsche last year. The 911 GT3 R is already represented in the game, but now receives a technical facelift with the 911 GT3 R Evo. The content update also includes the liveries of all DTM cars, including BMW, McLaren and Mercedes-AMG, with the individual design of each driver in the 2026 season.

DTM racers can also look forward to a brand-new series of events with the DTM Community Cup. This will take place after the current DTM eSports Championship and is planned to start in the week following the big on-site finale at the Nürburgring. The DTM Community Cup provides all sim racers with an opportunity to put the new cars through their paces. In the DTM eSports Championship itself, the cars from the past season will continue to be used.

As well as the new cars and liveries, the team from Fichtenberg will also release a completely modified Nürburgring-Nordschleife, an updated Monza, comprehensive optimisations to the dedicated servers, and a first glimpse of the brand-new in-game HUD.

All in all, more than enough reason to hook up your PC this summer, get behind the wheel, and immerse yourself in the 2026 season, complete with new DTM cars and new designs.
